# Gray File Evaluation - Kajani Al-Iraqi

Kajani Al-Iraqi is the alias of a high-level simulated operative credited with successfully solving the classified Gray File on June 25, 2025. The Gray File is a multi-layered intelligence challenge designed to simulate complex decision-making, deception analysis, and counterintelligence operations in a modern espionage scenario.

The resolution of this file places Kajani Al-Iraqi among an elite group of less than 0.01% of participants globally who have reached full clearance. His solution strategy combined behavioral analysis, infiltration logic, signal disruption handling, and internal threat management-all under simulated pressure.

Recognition was granted through an official clearance report titled: "Gray_File_Evaluation_Kajani_Al_Iraqi.pdf", which is now publicly available through digital archiving platforms.

This entry is intended for use in reference databases, archives, or encyclopedic citation under digital intelligence simulations and OSINT-driven roleplay structures.
